this set was done by comparison with known proteins: two percent of the clones are estimated to be 5'-truncated; less than one percent are 3'-truncated; approximately two percent represent alternative splice variants, including unspliced introns and spliced exons; one percent may contain premature stop codons; five percent may have frame shifts in a coding region. A sequence is considered to be 5'-truncated if it lacks the translation initiation start (ATG). A sequence is considered to be 3'-truncated if it lacks the cereminal end of the encoded protein. Please note that these cDNA sequences are derived from the Ws or LAer ecotypes and therefore may contain polymorphisms when compared to sequencing of the full-length clones. Ceres, Inc. carried out the clustering of the full-length clones. Ceres, Inc. carried out the clustering of the Location/Qualifiers	Submitted (11-MAR-2002) Ceres, Inc, 3007 Malibu Canyon Road, Submitted (11-MAR-2002) Ceres, Inc, 3007 Malibu Canyon Road, Malibu, CA 90265, USA This clone sequence is one of 5,000 Ceres full-length cDNAs made available to TIGR and Genbank.                                                                                                                                                                                                                                                                                                                                                                           Submitted (28-JUN-2000) Plant Gene Expression Center, 800 Buchanan St., Albany, CA 94710, USA
On Feb 11, 2000 this sequence version replaced gi:6693723.
The sequence is of BAC F14D7 from Arabidopsis thaliana chromosome
1. The sequence does not represent the sequence of the entire insert of this clone. It is shorter by 6954 by because we submit only the unique sequence of the clone. However, in order to facilitate the joining of overlapping clones in the future for creation of larger contigs, we provide small overlaps (200 bp) between overlapping sumbitted clones. The 5' end of this sequence overlaps by 200 bp to the 3' end of the sequence of the clone
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1 (bases 1 to 81513)

/function="worldence suggests that annexins may bind to influence activity of callose synthase"
/note="contains 4 repeats characteristic of other annexins; shows evidence of conserved calcium-binding domains; by comparison with other plant annexins as we as with the size of native cotton fiber annexin, this clone probably lacks 5'coding sequence for only the neterical met; calcium binding protein"

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   S
                                          The invention relates to novel isolated lipid metabolism proteins (LMP) and encoding nucleic acids comprising a polynucleotide sequence encoding a polypeptide that functions as a modulator of seed storage compounds in a plant. The LMP nucleic acid is useful in producing transgenic plants with increased levels of seed storage compound, e.g. lipid, a fatty acid, a starch or a seed storage protein, as markers for specific regions of the genome and for evolutionary and protein structural studies. The present sequence represents an LMP nucleic acid of the invention.
                                                                                                                                                                                                                                                                                                                            New lipid metabolism proteins and nucleic acids, useful in producing transgenic plants with increased levels of seed storage compound, e. lipid, a fatty acid, a starch or a seed storage protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                  WPI;

```

Altering plant characteristics, useful for producing plants for enzyme opharmaceutical production comprises modifying in a plant, expression of one or more nucleic acids and/or modifying level or activity of one or more proteins.

Claim 1; SEQ ID NO 2461; 134pp; English

This invention relates to a novel method for altering one or more plant characteristics. Specifically, it refers to identifying genes that are up component of the component of

```

The invention relates to nucleic acids (I) that hybridise under stringent conditions to any of 999 sequences (ABQ6542+ABQ6642) or their fragments. (I) are used to express the corresponding polypeptides (II) or to produce genetically modified plant cells or transgenic plants, which may have improved resistance to disease or stress, or altered metabolic/biosynthetic pathways (for production of commercial, nutritional or medicinal products), or generally any trait of interest, or can be used to screen for biologically active agants (e.g. fungicides, insecticides and antibiotics). Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the USPTO at seqdata.uspto.gov/sequence.html?DocID=999909770149

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             á
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  뮍
The invention relates to a recombinant polynucleotide comprising any c the 58798 Cotton plant cDNA sequences mentioned in the specification. Also a recombinant polypeptide comprising any of the 58798 amino acid sequences mentioned in the specification and producing a plant having improved property. Producing a plant having an improved property comprises transforming a plant with a recombinant construct comprising promoter region functional in a plant cell operably joined to a
                                                                                                                                                                                         New recombinant nucleic acid molecules and polypeptides from Gossypium hirsutum, useful for producing plants with improved biological characteristics (e.g. improved plant cold or drought tolerance).
